

SDITO Lab PC-CS6G4

Name: Diptadeep Ghosh

Roll No.: CSE/23/080

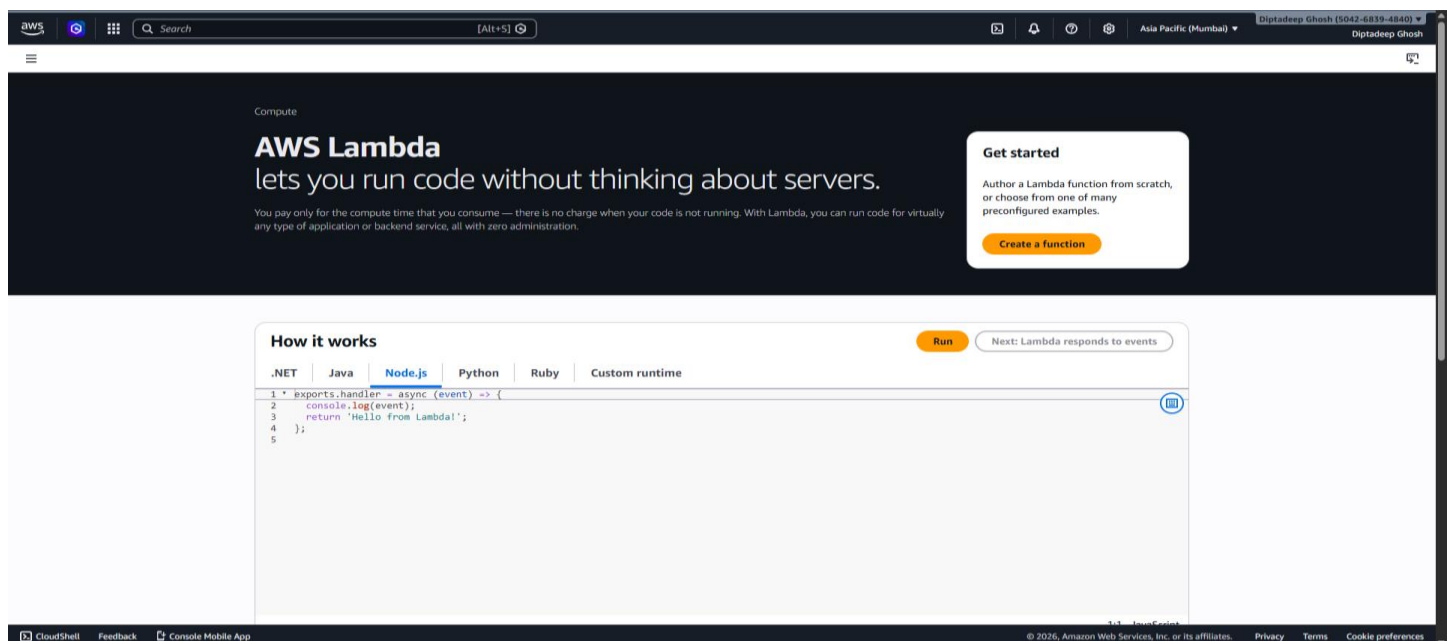

Exam Roll No. 11600223051

Assignment 15

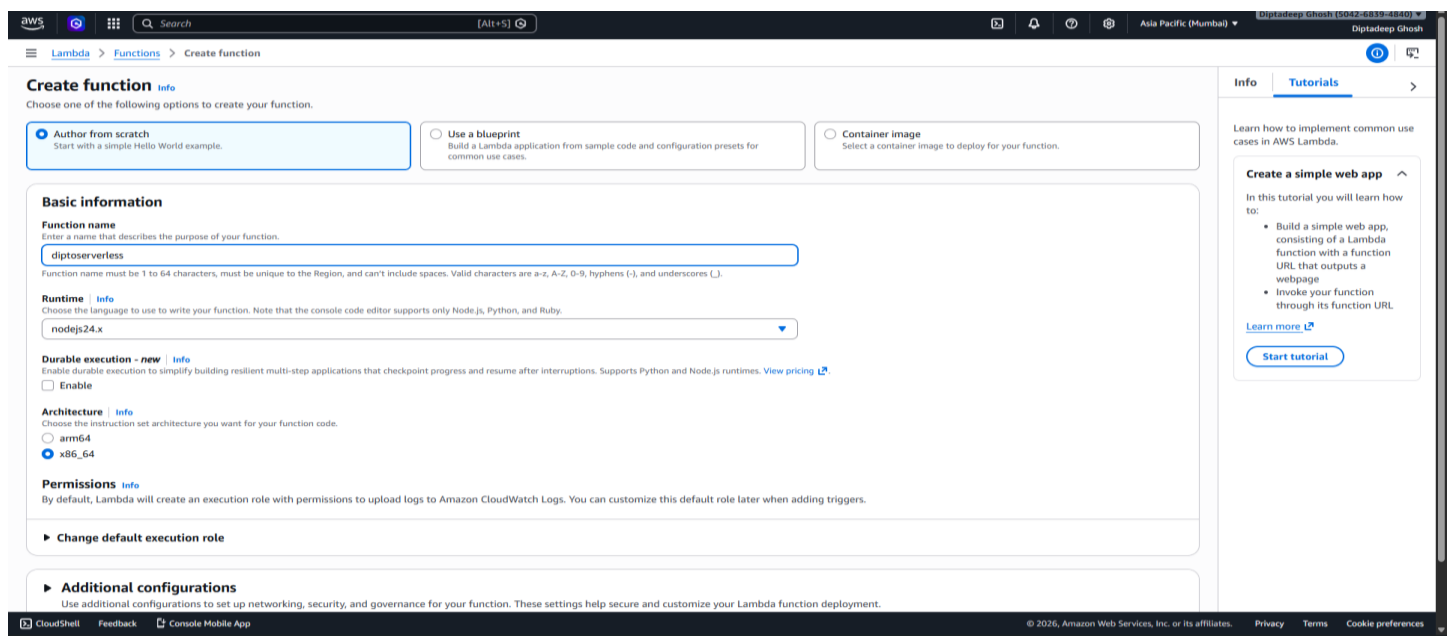

Problem Statement : Create a serverless computing service.

Solution:

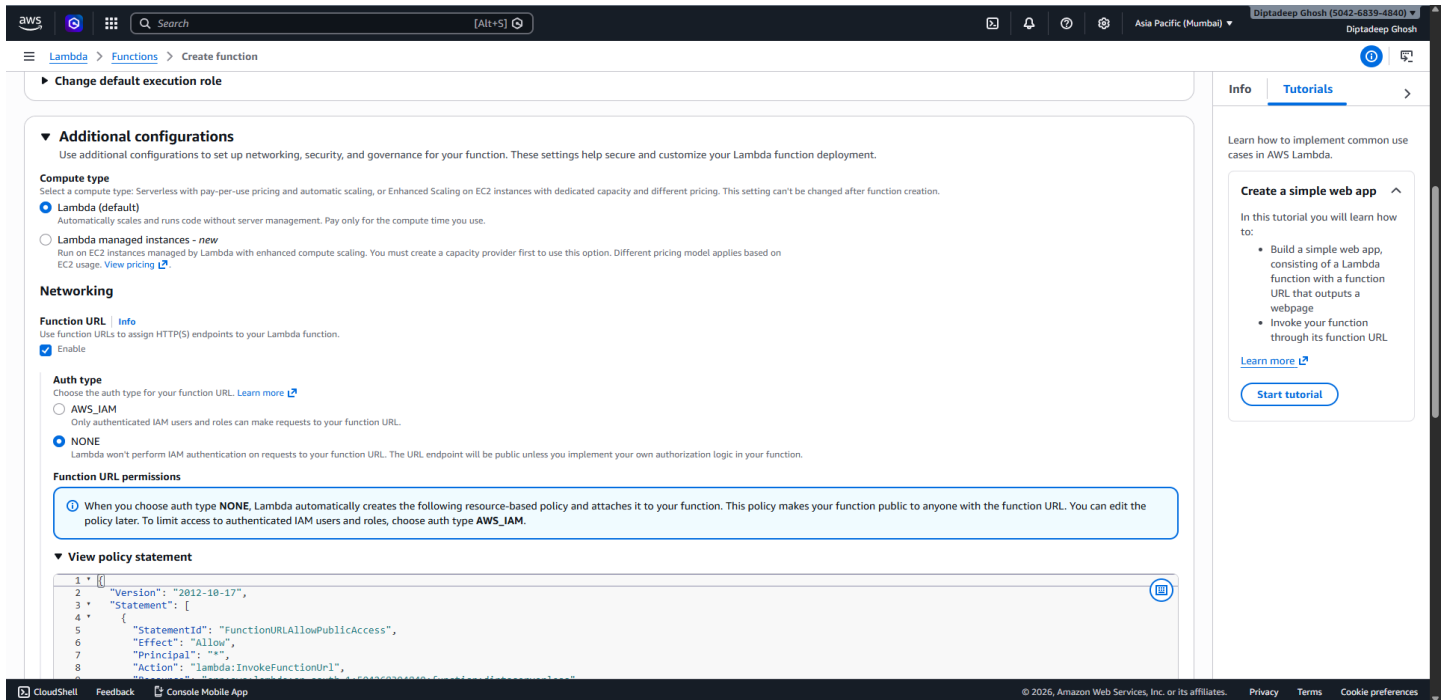

1. Search for 'Lambda' and click on it.

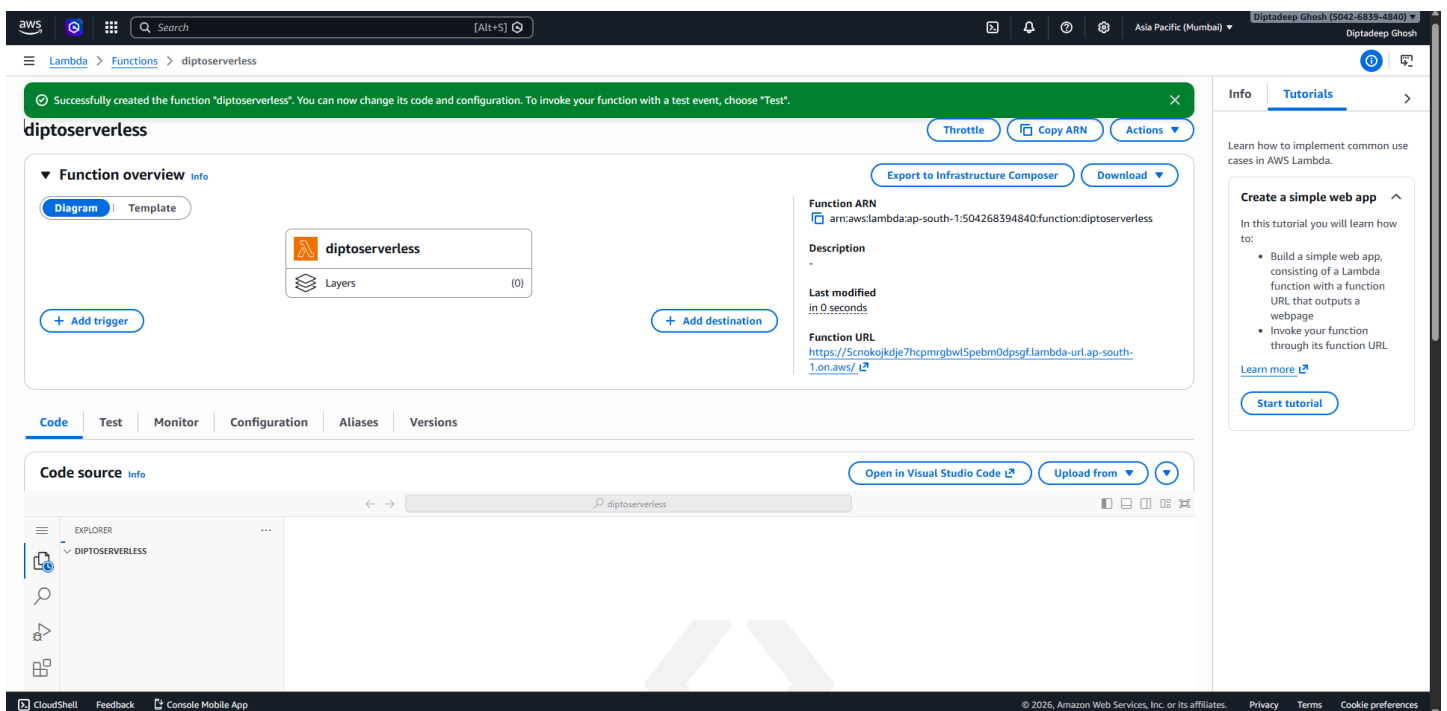

2. Click on 'Create a function' button. Give name (e.g. diptoserverless) to the function and under runtime select node.js.

3. Check the **Enable Function URL checkbox** & under Auth type, **select NONE**. Then click on Create Function.

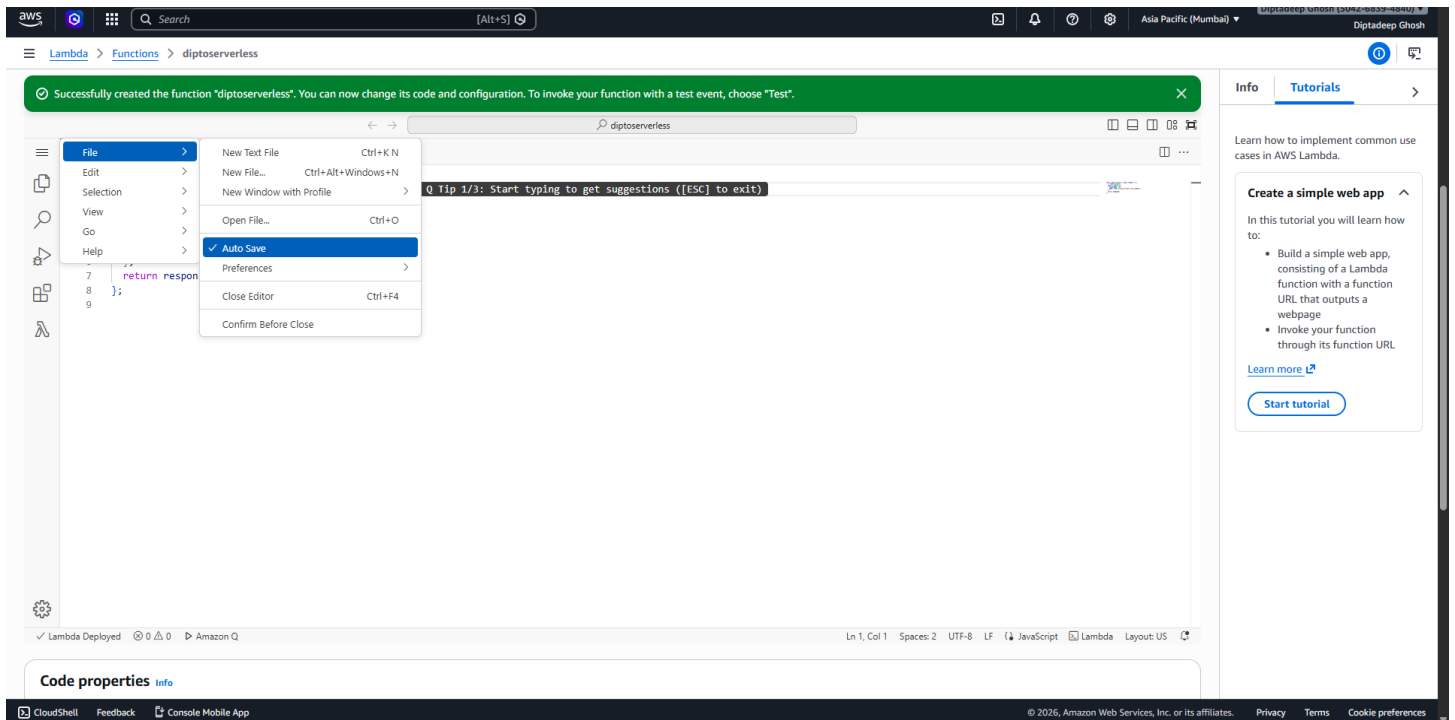

4. The function has been created. Now **copy the function URL** and paste it on a new tab.

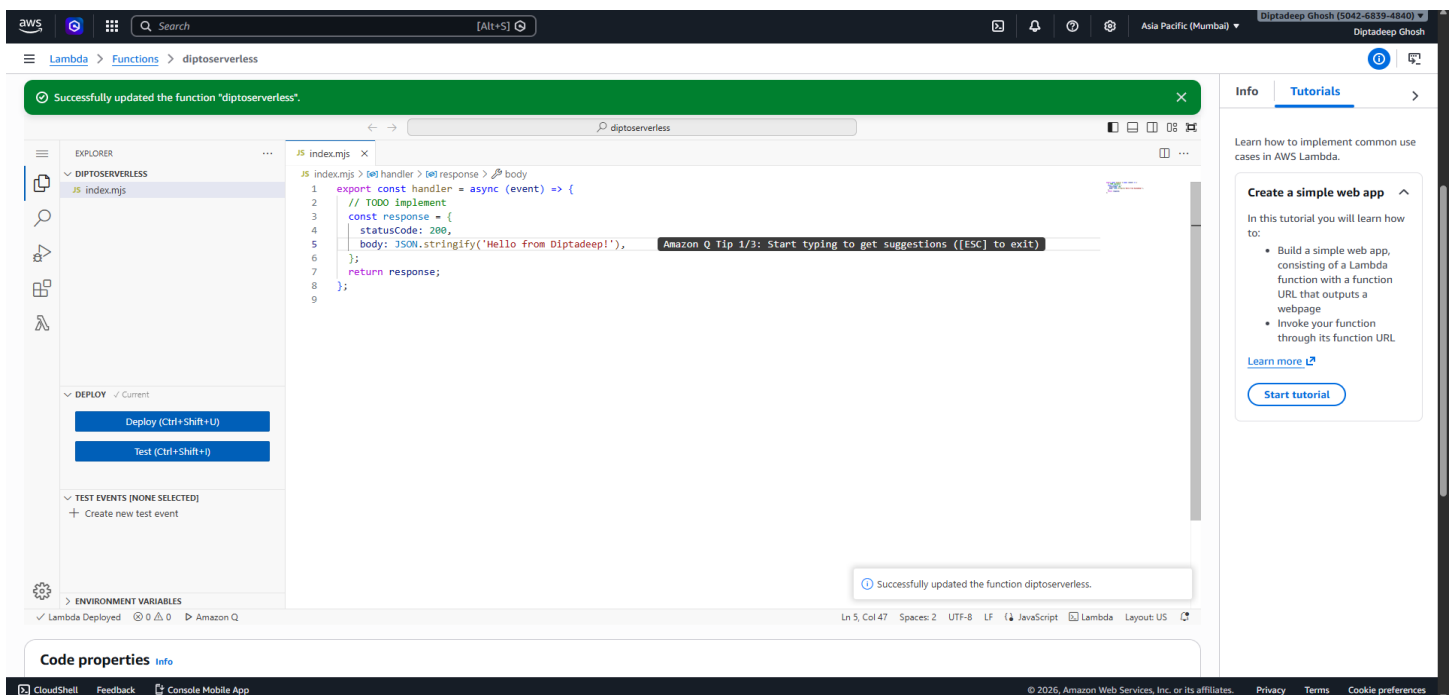

5. The following output should be obtained.

```
Pretty print ☐
"Hello from Lambda!"
```

6. Now in the code block click on Top Left Bar and go to **File** menu and Click on **Auto Save**.

7. Make some changes in the code where you can notice visible change as for me, I have change lambda into **"Diptadeep"**. After change click on the **deploy button** and deploy.

8. Again check the function URL. **Paste it on an empty tab** and see the visible change.
